

Identification & Diagnostic Services

This service is available via email and in-store, appointments recommended for in-store.

This is a service we provide to customers needing a plant, disease, pest, or other plant-related issue identified. This service is only available in-store and via email. We do not have a diagnostician available at all times we are open; therefore, appointments are recommended for in-store identification and diagnosis and can be made by emailing an appointment request to gardeninfo@plantkingdom.net. Sometimes a diagnosis cannot be made over email with photos; therefore, we may schedule an appointment for you to bring in a sample to be examined in person and/or under the magnifying lens.
